

## WASTE TO RAW MATERIALS - MACHINERY DESIGN - SOFTWARE

The Wastic management team has a combined experience in plastics recycling for almost 50 years. Now, they offer you this knowledge. Wastic can help you find solutions for your plastics, whether waste or raw materials, they offer you consultancy on your new projects or on your existing recycling lines. Their team has also developed a software system designed especially for recycling businesses that includes registers for in- and outgoing materials, traceability and stock and waste management.

### RECYCLING

Recycling of plastics, mainly polyolefins. The process contains material size reduction by shredding, washing and separation techniques, grinding and regranulating. Wastic transforms your plastic waste into secondary raw materials that are used to make products for car bumpers to crates, from bottles to barrels and many others. Everybody is welcome to visit their plant, also schools and associations, if they want to learn more about plastic recycling.

### CONSULTING

With a combined experience of more than 50 years, the management of Wastic has been consulted on many recycling projects around the world. From carpet recycling in the USA to bigbags recycling in France, PET recycling in Morocco, PE/PP in Belgium, and many more. They offer team consulting, so that all their experiences are taken into account. A hands-on training for employees, a presentation for your board, the complete development of your project, both commercially and technically, Wastic can offer many different formulas to help you. The team has learned from their mistakes, so you don't have to make them.

### MACHINERY SALES

Wastic buys and sells second hand equipment, sold either through auction on their auction site or by connecting the customer directly to the seller. They offer the best solutions for any machinery needs, whether you want to sell or buy. Their experience will help you pick the best machines for

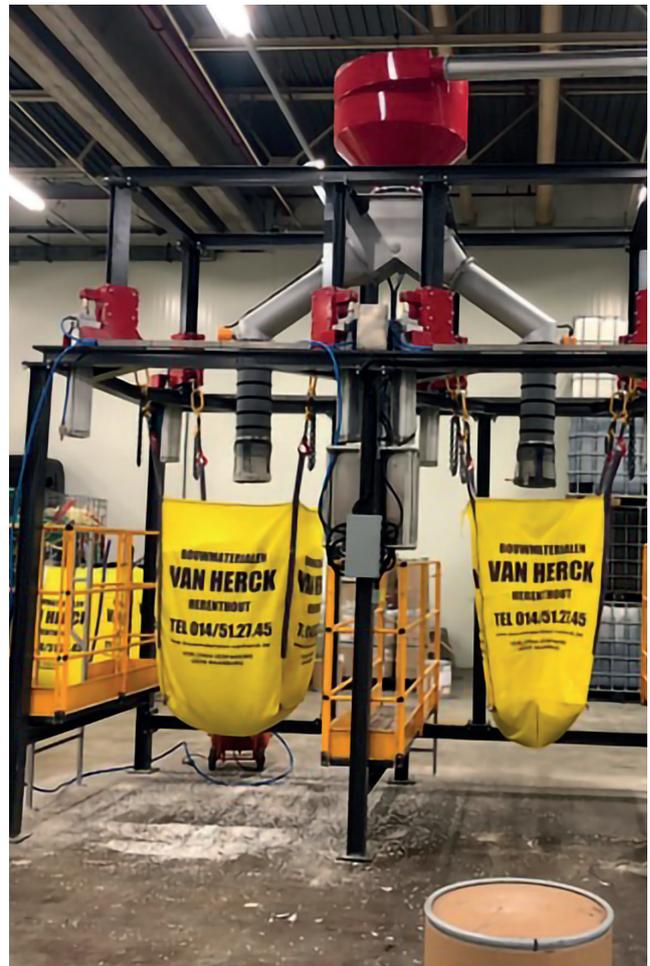

your specific project. If you consider a new process for your recycling needs, Wastic can also help you draw the process line and guide you towards one of our specialist machine builders. The solution to a good quality end product is more about eliminating the impurities in your plastics waste than it is about the electrical power of the grinder. This is the experience Wastic brings to the table in your negotiations with your or their project machine builder.

## PROJECT DEVELOPMENT

Wastic offers management solutions for the needs of your company, helping you start-up your recycling company. They follow your project from start to the point where you can run it without their help - and try to get you there as quickly as possible. One of their experienced managers can help you assemble a team from within or from outside your existing corporation. They negotiate with your investors, they help you find the right solutions technically and they train your staff. They get your people to contact the right customers, they get your staff to recognize the right input material and how to quality control it. When your team manager is ready, they step back little by little and until you are fully operational and ready to become one of the leaders in plastic recycling.
